

## ASPALEN® Anti-dew Asparagus Film

ASPALEN® Anti-dew Asparagus Film is manufactured by a triple-layer co-extrusion process which permits the optimal usage of selected raw materials. The various active ingredients are effectively homogenised in the individual film layers.

The use of ASPALEN® Anti-dew Asparagus Film prevents droplet formation in both cold and warm conditions.

### Advantages:

- Triple-layered structure for optimal anti-dew effect and for strength, which prevents splitting during harvesting
- Highly transparent - 99 % light permeability, allowing unhindered thermal radiation; the asparagus is clearly visible
- Anti-dew effect inhibits droplet formation
- Thermal effect for improved warming, resulting in higher crop yields

Colour:	transparent
Thickness:	0.035 mm
Width:	1.6 m and 1.7 m
Length:	1000 m
Folding:	flat film
