

Mulch film

Our mulch film is ideal for suppressing weeds.

This can lead to a marked reduction in the use of pesticides.

Warmth and moisture are retained in the soil, resulting in higher yields and earlier harvests.

The use of special additives in the film provides the conditions for optimum plant growth. Our mulch film also exhibits excellent mechanical strength and particularly good machinability.

Material	LDPE
Film type:	Monofilm or co-extruded film
Colour:	Black/light-impermeable, or black/white
Thickness:	0.02 mm to 0.05 mm
Width:	0.75 m to 2 m
Length:	1000 m - 2,500 m
Layers:	Flat film

Other sizes and grades available on request.
